

Mechanical Wood Industry

RAW MATERIAL HANDLING

MECHANICAL WOOD INDUSTRY

Complete mechanical engineering, automation and contract manufacturing services for the mechanical wood industry.

Wood is a versatile material that's easy to process for products in the construction industry and the energy sector. Efficient processes and machines are needed for the production of sawn timber, plywood, veneer, MDF, OSB or partial board and pellets. As your subcontracting partner, we offer mechanical engineering, automation and contract manufacturing services for technology providers in the mechanical wood industry. We can take care of modernizing your production lines.

RAW MATERIAL HANDLING

The raw material needs to be pre-treated before further processing. In different mechanical wood industry processes the raw material can be anything from timber and logs to wood chips. The wood is treated in various ways depending on the process – debarking, chipping, screening, storing, drying or gluing. At Makron, we are experts in production and mechanical engineering services.

What Makron does

We manufacture machines that make the raw material handling efficient, according to your design. Our professionals in mechanical engineering and automation complete your solutions.

Products & expertise

- Mechanical engineering
- Automation engineering
- Electrical engineering
- Machine manufacturing
- Conveyor manufacturing
- Electrical control cabinets
- Electrical installations
