**PAPER FEEDING**

# BUILDING CONSTRUCTION INDUSTRY

**Production technology for recycled cellulose insulation as well as machine manufacturing for precast concrete production.**

Makron offers complete production technology to meet your specific demands in the building construction industry. We are specialized in recycled cellulose insulation production technology and machinery. Makron has developed these production lines through the input from our long-term customers. Our know-how covers engineering and design, production, industrial automation and lifecycle services. We also manufacture machines for precast concrete production for the machinery technology provider Elematic as a subcontracting partner.

## PAPER FEEDING

In the first step of cellulose insulation production the raw material, paper, is fed evenly onto the pre-handling table from where it is moved to the conveyor. On small capacity lines, the impurities are separated manually. On large capacity lines, the raw material has already been purified and baled, and the paper bales are fed onto the conveyor.

### What Makron does

The Makron pre-handling table is designed for manual sorting of loose paper. For larger capacities, Makron delivers automated paper feeding systems for paper bales.
