CONVEYOR TECHNOLOGIES

Conveyor solutions for your industrial needs.

Innovative conveyor solutions streamline and enhance industrial processes. Makron combines strong automation and production expertise with decades of experience in conveyor technologies. We design and deliver conveyor systems tailored to your needs, whether for intralogistics, production lines, or the handling of recyclable materials. Our conveyor systems support automation, improve safety, and optimize space utilization. We also support technology providers with our conveyor technology expertise. Our specialties include special conveyors for demanding environments and challenging materials when a basic solution isn't enough.

TRAVERSES

Traverses provide a precise solution for material handling, whether you're conveying single items, pallets, or even heavy loads. By minimizing manual handling, they not only enhance efficiency but also reduce the risk of injuries, fostering a safer work environment. Moreover, their ability to automate sorting processes significantly boosts productivity and throughput.

What Makron does

Each traverse is custom-designed to meet the specific requirements and space constraints making them ideal for even the most complex and demanding settings.
