# INSTALLATION AND LIFECYCLE SERVICES

**A wide range of lifecycle services for your industry processes and machinery.**

At Makron, we aim to provide the best possible customer service. Let us introduce you to our Lifecycle Services. These include all the services you need, from auditing and production line modernization to maintenance and spare part deliveries. We can also arrange training for your personnel to teach them about new interfaces and machine functions.

---

## AUDITING

We specialize in a variety of auditing services. Auditing operations and modernization can improve the production and functionality of a machine or process. With an audit, the initial state of a process or product is analyzed, and based on the results, the next operational steps are decided. Auditing can provide resource and safety benefits because the state and functionality of your equipment will be properly assessed. Our goal is to guarantee you a safe and efficient working environment with minimized production stoppages. Makron will thoroughly audit and document your facility.

### What Makron does

Starting with proper auditing helps identify and prioritize the actions needed. Our experts will give you comprehensive need assessments for everything from system interface definitions, to safety and modernization, with complete maintenance services.

### Products & expertise

- Usability surveys
  - Safety mapping
  - Safety auditing
