

MAKRON

Marine Industry

FRESH WATER GENERATION

MARINE INDUSTRY

Your subcontracting partner for industrial automation, engineering and manufacturing in the marine industry.

Makron supports your technology needs as an engineering, automation and manufacturing subcontractor. We have years of experience in offering our automation expertise to a marine technology company working with waste and wastewater treatment systems. For automation systems, we cover your needs completely from planning to programming, to electrical control cabinet manufacturing and commissioning.

FRESH WATER GENERATION

Water treatment units process, service, and turn seawater into drinking water. The equipment for fresh water generation filters and disinfects the water, adjusts its hardness and mineralizes the fresh water. Water is essential for passengers and crew onboard so Makron's automation solutions ensure that your processes run smoothly. Our specialized engineers are experienced in automation process solutions and ensuring the user-friendliness of your process and technology.

What Makron does

We have experience in delivering automation projects for fresh water generation to technology providers. Our experienced engineers are ready for challenging projects in this area, no matter their size.

Products & expertise

- Electrical engineering
- Programming
- Electrical control cabinets
- Mechanical engineering
- Commissioning
