VACUUM COLLECTION

MARINE INDUSTRY

Subcontracting automation, engineering, and machine manufacturing for the marine industry.

Makron supports your technology needs as an engineering, automation and manufacturing subcontractor. Makron is an expert in heavy fabrication and can manufacture steel structures for the marine industry. We also offer automation expertise to marine technology companies working with waste and wastewater treatment systems. For automation systems, Makron covers your needs completely from planning to programming, to electric control cabinet manufacturing and commissioning.

VACUUM COLLECTION

Vacuum collection on board vessels is an essential comfort factor; it takes care of waste produced by a ship's passengers and staff. Complete planning, machinery and automation solutions are needed for vacuum collection to work properly. Vacuum collection units collect the sewage, condensation, and food waste onboard by vacuum pumping it into a sewage treatment plant or collection tank. As your partner, we offer you intelligent automation to make your waste treatment processes efficient.

What Makron does

We offer automation solutions for food waste and sewage vacuum collection units as a subcontractor to waste technology providers. We also manufacture the electrical control cabinets for your process, we take care of commissioning, and train your staff.

Products & expertise

- Electrical engineering
- Programming
- Electrical control cabinets
- Spare parts
- Commissioning
