MECHANICAL WOOD INDUSTRY

Your subcontracting partner for machine manufacturing, mechanical engineering and industrial automation.

Wood is a versatile material that's easy to process for products in the construction industry and the energy sector. Whether you need to make sawn timber, plywood, MDF, OSB or partial board and pellets, you need efficient processes and machines. As your subcontractor, we manufacture the machinery you need based on your drawings. On top of this, we offer you our industrial automation and mechanical engineering services.

SAWMILL PRODUCTION LINES

Different sizes of logs are sorted by size before they are sent to the saw. The logs can be sawn with or without chipper canter to produce high-quality straight lumber. The cut lumber is divided by size and trimmed to the correct length. After this, it is stacked and moved to the drying kiln. The dry finished lumber is then packed for delivery. As your subcontracting partner, we manufacture the machinery and provide you with our expert services to complete your sawmill technology needs.

What Makron does

As your subcontracting partner, we manufacture machinery for sawmills, from sorting lines and conveyors, to saws and chipper canters, and stacking and packing equipment and lines. We complete it all with our automation and mechanical engineering services.

Products & expertise

- Log sorting lines
 - Saw lines
 - Different kinds of saws
 - Chipper canters
 - Lumber handling lines
 - Drying kilns
 - Electrical control cabinets
 - Automation engineering
 - Electrical engineering
 - Electrical installations
 - Mechanical engineering
-
