

Paper Industry

WINDERS AND ROLL HANDLING

PAPER INDUSTRY

We manufacture machinery and equipment for machinery technology providers in the paper industry.

The paper industry uses wood as a raw material to manufacture paper-based products. Paper-based products are found in everyday life at home and at work. These products are used as solid and liquid food containers, paper sheets, documents and magazines, and in various other packaging products. The pulp and paper industry regularly use nanotechnology, meaning that together they are also the world's largest nanotechnology industry. For this huge business area, Makron manufactures machinery for wood handling systems, and reeling and paper roll handling phases, either as a subcontractor or a contract manufacturer.

WINDERS AND ROLL HANDLING

Winders and roll handling machines are an essential part of paper production. These machines complete the production process by packaging the reels and ensuring they are ready for transportation.

What Makron does

We manufacture winders and roll handling machines based on your engineering and design. This enables the paper mill to properly prepare finished paper reels for delivery.

Products & expertise

- Winder and roll handling machine manufacturing
- Conveyors
- Electrical control cabinets
- Automation engineering
- Electrical engineering
- Electrical installations
- Mechanical engineering
