MANUFACTURABILITY AND PRODUCTION DEVELOPMENT

PRODUCTION

We are experts in industrial project business based machine manufacturing.

Makron is your one-stop solution provider in machine manufacturing. We handle different projects from your designs and drawings to a complete working product. Working together with Makron means you have high-quality expertise and professionals providing you with the best possible service. We value the quality of our work and therefore we thoroughly document production. We are able to obtain all the needed parts, components, and materials for you. We are happy to take complete responsibility for the supply chain, to stay on schedule and get the necessary components on time. Our work plans ensure that every step of the process is planned carefully. During the production process, we will also report on our progress, step-by-step, to keep you up-to-date. And we constantly develop our products and production processes. We appreciate hands-on partnership where we learn from each other to make projects more efficient and products better.

MANUFACTURABILITY AND PRODUCTION DEVELOPMENT

At Makron, we consistently focus on developing the manufacturability of the products and increasing productivity in manufacturing. We aim for long-term cooperation with our customers so that we can develop better products and make the manufacturing process even more efficient. This results in savings and noticeable benefits for you. We use our experience to further develop the products we manufacture. Makron-built products will last through many years of heavy use. In our prototype department, we design, manufacture and test a range of different prototypes.

What Makron does

We have decades of experience in developing our own technologies and products. As part of our contract manufacturing services, we can develop your products and their manufacturability together with you. We can modify the features and structure of a product to create a better result, with faster and more efficient production. For example, by lowering the need for raw materials we can save on production costs.

Machinery & Services

- Product development
- Prototype development
- Production development
- Jig design and manufacturing
