

MAKRON
A Promise to Complete.

Pulp Industry

PULP MANUFACTURING MACHINERY

PULP INDUSTRY

We are a contract manufacturer of pulp manufacturing machinery and equipment for technology providers.

Pulp is one of the most abundant raw materials worldwide. To make pulp, efficient manufacturing lines are needed. We manufacture pulp manufacturing machinery and machine components for technology providers in the pulp industry. You can also add intelligent automation and services from Makron to all your pulp manufacturing lines.

PULP MANUFACTURING MACHINERY

Pulp manufacturing starts with an efficient wood handling process from where the wood is then sent for further processing. The logs are received, debarked, chipped and screened before the process continues on the fiber line.

We are experts in manufacturing high-quality, heavy machinery for pulp technology providers, and as a subcontractor, we specialize in the raw material handling phase of pulp production. We also offer you engineering expertise for the different phases of the pulping process. And we can provide you with electrical control cabinets and automation services to complete your process.

What Makron does

We manufacture high-quality machinery for production technology providers who serve pulp mills. To complete your needs, we also offer mechanical engineering and automation services.

Products & expertise

- Machinery manufacturing
- Mechanical engineering
- Electrical control cabinets
- Automation engineering
- Electrical engineering
- Electrical installations
